

Toolbox Talk

While Construction is one of the most dangerous professions -

It doesn't need to be the most deadly!

The Tradesmen Safety Hotline is one tool to help ensure job site safety for you and your coworkers. If you witness unsafe work conditions or have a safety concern, **alert your site supervisor, your field office AND call the Safety Hotline, if necessary.**

Tradesmen Safety Hotline: 844-40B-SAFE

Safety is our #1 Core Value. We want you to go home to your family, safe at the end of the day, every day. Speak up if:

- You feel the PPE you have, or have been provided for a particular job or task is not adequate to protect you.
- You have been asked to perform a new task or job that you believe requires additional training and/or your current PPE is no longer adequate.
- You have been asked to perform a task that you believe is unsafe to yourself and your coworkers.
- You have identified a hazard, such as repetitive movement, awkward position, new equipment or changing weather conditions, for example.

Safety Hotline concerns are immediately reviewed.

There will be no negative repercussions for reporting an injury or job site safety concern.

You are responsible and accountable for your safety and that of your co-workers. Make the safe choice everyday and go home injury free.

I have read & understand the training provided. If I have any questions about the training I will contact my local field office.
